

Webameen tech stack

FOUNDATION ONLY

The tools we chose, in simple words

What we use and why

01

APP FRAMEWORK

Next.js + React

Build the website and keep server work in the same app.

02

CODE LANGUAGE

TypeScript

Catch many coding mistakes before the app runs.

03

APP STRUCTURE

Modular monolith

Keep one app, organized into clear parts.

04

UI STYLING

Tailwind CSS

Build a clean layout that works on different screen sizes.

05

DATA + SIGN-IN

Supabase + PostgreSQL

Plan to store business data and manage sign-in in one place.

06

INPUT CHECKS

Zod

Check settings and user input before using them.

07

CODE QUALITY

Biome

Check code style and format files with one tool.

08

TESTING

Vitest + Playwright

Test small code pieces and click through pages in a browser.

09

LOCAL SETUP

Node.js 24 + npm 11

Run the app and manage its packages on a computer.

10

HOSTING

Not chosen yet

Confirm the pilot and data region before selecting a host.

What is ready today?

The navigation shell is running. Supabase and sign-in are planned, but not connected. There is no database schema or production setup yet. Hosting will be chosen after the business confirms its pilot and data region.
